

# Control Structures

# What are Control Structures in PHP

**Control structures enable us to control the flow of execution in a PHP script. They allow you to make decisions, loop through code blocks, and execute certain code based on conditions.**

# Types of Control Structures

- **Conditional Statements**
- **Looping Statements**
- **Branching Statements**
- **Include and Require Statements**

# Conditional Statements

- **if Statement**
- **if..else Statement**
- **elseif Statement**
- **switch Statement**

# Looping Statements

- **for loop**
- **while Loop**
- **do...while Loop**
- **foreach Loop**

# Branching Statements

- **break Statement**
- **continue Statement**
- **goto Statement**
- **return**

# Include and Require Statements

- **include**
- **include\_once**
- **require**
- **require\_once**
