

Looping Statements

do-while
Loop

do-while Loop

The do-while loop in PHP is similar to the while loop, but with one crucial difference: it evaluates the condition after executing the loop's block of code. This means that the block of code inside the loop will always execute at least once, even if the condition is initially false.

do-while Loop

Syntax:

```
do {
```

```
// Code to be executed
```

```
} while (condition);
```
