

preg_match()

In PHP, the function `preg_match()` is used to perform a regular expression match against a string. It searches the given string for a pattern specified by a regular expression and returns true if the pattern is found, false otherwise.

Syntax

```
preg_match(pattern , string , array)  
  
/pattern/modifiers;
```

Example

```
preg_match("/PHP/","PHP program")  
preg_match("/php/i","PHP program")
```
