

# Knowledge Required for PHP Projects

Database

# What is Database?

A database is a structured collection of data organized in a way that allows for efficient storage, retrieval, and management of information. If you want to store data and manage large amounts of data in a structured manner, which can be easy to access, update, analyzed, managed and searched, this is the key thing of a database.

## Why not in files?

The most important thing is ,the data in the database is stored in a structured way. Managing of data becomes very easy

# How data is stored in database?

Tables

Rows/Records

Column/Fields

--	--	--	--

Table basically is help to organize the data in and row in a column, and each database has multiple tables.

Database you can see the collection of tables and table is a collection of data.
