

Variables and Constants

PHP Scope

3 TYPES OF SCOPES IN PHP

- Local Scope
- Global Scope
- Static Scope

LOCAL SCOPE IN PHP

A local variable is declared within a function or block of code and is only accessible within that scope.

Local Variable: Variable defined inside function will die after the function has been completed means after the function has been executed , variables cannot be accessed outside.

3 TYPES OF SCOPES IN PHP

- Local Scope
- Global Scope
- Static Scope

GLOBAL SCOPE IN PHP

A global variable is defined outside any function and is accessible throughout the script

Syntax : `global $variablename;`

3 TYPES OF SCOPES IN PHP

- Local Scope
- Global Scope
- Static Scope

STATIC SCOPE IN PHP

Static variables retain their values between function calls.

Syntax : `static $variablename;`
