Looping Statements

for-each Loop

for-each loop

The foreach loop in PHP is specifically designed for iterating over arrays and objects. It simplifies the process of looping through array elements or object properties.

for-each loop

Syntax:

Indexed Array

```
foreach ($array as $value) {

    // Code to be executed for each $value

}
```

for-each loop

Syntax:

Associative Array

```
foreach ($array as $key => $value) {

    // Code to be executed for each $value

}
```
